STUDENT DETAILS:

```
% OKODUWA OSEMUDIAMEN  
  
% 18CK024239  
  
% ELECTRICAL AND ELECTRONICS ENGINEERING  
  
% EEE515
```

Import data from spreadsheet

Script for importing data from the following spreadsheet:

```
Workbook: C:\Users\Pavilion\28BusLineData.xlsx  
Worksheet: Sheet1
```

Auto-generated by MATLAB on 31-Oct-2022 14:19:21

Set up the Import Options and import the data

```
opts = spreadsheetImportOptions("NumVariables", 4);  
  
% Specify sheet and range  
opts.Sheet = "Sheet1";  
opts.DataRange = "A2:D34";  
  
% Specify column names and types  
opts.VariableNames = ["BusFrom", "BusTo", "R", "X"];  
opts.VariableTypes = ["double", "double", "double", "double"];  
  
% Import the data  
BusLineData = readtable("C:\Users\Pavilion\Downloads\Telegram Desktop\28BusLineData.xlsx", opts, "UseExcel", false);
```

Convert to output type

```
BusLineData = table2array(BusLineData);
```

CODE: YBus28.m

```
f = BusLineData(:, 1); % first vector column of the bus number (e.g bus from 1 -...)  
t = BusLineData(:, 2); % second vector column of the bus number(e.g bus to ... - 2)  
r = BusLineData(:, 3); % third vector column of the bus number  
x = BusLineData(:, 4); % fourth vector column of the bus number  
nL = length(f); % length of row (branches)  
nBUS_length_column = max(max(f), max(t)); % no of buses; note: branches X bus  
% Z = R+jX  
  
Z = r + 1j*x; %1j and j are the same
```
